

PRASANNA SURESH NAIK

DevOps Engineer | Kubernetes | AWS | Azure | CI/CD | GitOps | Infrastructure Automation

prasannanaik431@gmail.com • +91 6362090078 • linkedin.com/in/prasannanaik • leetcode.com/prasannanaik

PROFESSIONAL SUMMARY

DevOps Engineer with 1.5+ years of experience designing, automating, and scaling CI/CD pipelines, Kubernetes infrastructure, and GitOps workflows across 35+ production environments. Proven track record reducing deployment times by 80%, eliminating manual overhead through Helm and Ansible automation, and enforcing infrastructure reliability through secrets management and policy-as-code. Experienced with AWS, Azure, Secrets Manager, Azure Key Vault, Kyverno, Flux2, Terraform, Prometheus, Grafana, Kibana, Elasticsearch, and CloudWatch.

WORK EXPERIENCE

Software Engineer – DevOps | Mareana Software Ltd

Apr 2026 – Present

- Promoted to Software Engineer for exceptional contributions to CI/CD automation, Kubernetes platform engineering, and infrastructure reliability.
- Architecting next-generation deployment pipelines with canary, blue-green, and automated rollback strategies to achieve zero-downtime releases.
- **Secrets Management:** Implemented full lifecycle secrets management using AWS Secrets Manager and Azure Key Vault with dynamic injection and automatic rotation for Kubernetes workloads.
- **Policy as Code:** Enforced Kubernetes admission control and cluster-wide governance using Kyverno, ensuring CIS benchmark compliance and preventing privilege escalation.
- Expanded GitOps coverage with Flux2 across multi-cluster environments and additional namespaces.
- **Observability:** Built and maintained full-stack observability using Prometheus, Grafana, Kibana, Elasticsearch, and AWS CloudWatch with proactive alerting and dashboards.
- Driving FinOps practices by integrating environment cost tracking, automated resource scheduling, and idle-resource elimination.

Associate Software Engineer – DevOps | Mareana Software Ltd

Oct 2024 – Mar 2026

- Managed 35+ production and staging environments supporting multiple microservices with zero-downtime Kubernetes deployments.
- **CI/CD Pipelines:** Designed and implemented scalable Jenkins/Groovy pipelines reducing deployment time by 80% and accelerating developer release cycles.
- **Helm Frameworks:** Developed reusable Helm deployment frameworks for Kubernetes microservices, reducing manual configuration effort by 90%.
- Implemented GitOps workflows using Flux2 to standardize Kubernetes deployments with version-controlled, auditable releases.
- Automated infrastructure provisioning using Ansible including Neo4j and PostgreSQL configuration, improving reliability and repeatability.
- Deployed centralized monitoring with Prometheus and Grafana integrated with Slack and Email alerting, reducing MTTR and MTTR.
- Integrated SonarQube into CI/CD pipelines for static code analysis and automated quality gate enforcement across all microservices.

Tech Stack: AWS · Azure · Kubernetes · Docker · Jenkins · Groovy · Helm · Flux2 · Ansible · Terraform · Kyverno · AWS Secrets Manager · Azure Key Vault · Prometheus · Grafana · Kibana · Elasticsearch · CloudWatch · SonarQube

Problem Setter – Intern | Mocha Works (Remote)

Apr 2023 – Jan 2024

- Designed multi-difficulty algorithmic challenges with robust test cases for competitive programming platforms.
- Validated problem logic, edge cases, and solution correctness collaborating with engineering teams using Python.

KEY PROJECTS

EMS – Environment Management System

- Built a DevOps automation platform enabling teams to provision environments and build custom CI/CD pipelines from a unified UI with one-click deployment.

- Implemented automated environment scheduling (start/stop) to eliminate idle non-production cloud spend, delivering measurable FinOps cost savings.
- Developed per-environment cost analysis and budget monitoring dashboards for full infrastructure spend visibility.

Automated CI/CD Pipeline

- Built a database-driven Jenkins/Groovy CI/CD pipeline integrated with EMS to dynamically fetch configurations and automate builds, validations, and deployments.
- Reduced deployment cycles from hours to minutes and eliminated repetitive manual tasks, improving operational efficiency.

Centralized Logging & Observability Platform

- Built a real-time log streaming, anomaly detection, and root-cause analysis system using Python FastAPI, Elasticsearch, and Kibana across distributed Kubernetes services.
- Integrated LLM-based anomaly detection for automated error pattern summarization and actionable remediation insights, reducing MTTR significantly.

TECHNICAL SKILLS

CI/CD & GitOps: Jenkins, Groovy, Flux2, Helm, ArgoCD, SonarQube, Pipeline Automation, Canary/Blue-Green Deployments

Container Orchestration: Kubernetes, Docker, Helm, Kyverno, Namespace Management, RBAC

Secrets Management: AWS Secrets Manager, Azure Key Vault, Dynamic Injection, Secret Rotation, Vault

Infrastructure as Code: Terraform, Ansible, Infrastructure Provisioning, Configuration Management

Monitoring & Observability: Prometheus, Grafana, Kibana, Elasticsearch, AWS CloudWatch, Alertmanager, Loki

Cloud Platforms: AWS (EC2, S3, EKS, IAM, CloudWatch, Secrets Manager), Azure (AKS, Key Vault, Monitor)

Programming: Python, Groovy, Bash, C++

EDUCATION

B.E. – Computer Science & Engineering | **RV College of Engineering, Bengaluru**

2020 – 2024

CGPA: 8.33 / 10

ACHIEVEMENTS

- **LeetCode Rating 1752 (Max):** Ranked 7th in India in LeetCode Biweekly Contest 126.
- **Spot Award at Mareana:** Recognized for designing and implementing Helm-based reusable deployment frameworks.
- **Ace Alliance Team Award:** Delivered the IFAAC demo environment ahead of schedule.
